

ACTIVITY 13

Global Tech Ambassador & Open-Source Pathway Selection

Hritik Anand | SRN: R25EJ042 | B.Tech CSIT | 2nd Year, 3rd Semester | REVA University

1. Program Analysis & Target Selection

Selected programs: **GitHub Campus Experts** (open-source/community leadership) and **Microsoft Student Ambassadors** (Microsoft technology, AI learning and student community). These two programs match a CSIT student's interest in GitHub, software development, technical learning and community participation.

Criteria	GitHub Campus Experts	Microsoft Student Ambassadors
Focus	Build and grow technical communities on campus; leadership, public speaking, technical writing and software development.	Learn Microsoft technology, lead with AI, share knowledge, build practical skills and support other students.
Eligibility	Official GitHub Docs: GitHub user for at least 6 months; 18+; enrolled in higher education; more than 1 year remaining before graduation; student status validated through GitHub Student Developer Pack.	Current Microsoft official information says the program is open to students across backgrounds/fields and has no application or interview; participation begins through the Student Ambassadors sign-up/onboarding process.
Application / Timing	GitHub Docs says applications open every July for one month. The course reference supplied with this activity describes a biannual cycle and an approximately February 2027 next cycle; current official GitHub Docs should be used for live timing.	The course reference lists open/continuous onboarding. Microsoft's 2026 official program announcement states there is no application required and students can get started through the Student Ambassadors program.
Benefits	Six-week training, mentorship and support; development of public speaking, technical writing, software development and community-building skills; opportunities to lead meetups, conferences, hackathons and projects.	Microsoft describes learning, community, mentorship/peer connection and milestone-based development. The 2026 announcement also lists access to Microsoft technologies including Microsoft 365 Copilot, Visual Studio Enterprise and monthly Azure credits after onboarding.
Fit with my profile	Strong connection to my existing GitHub portfolio, GitHub Pages website and programming projects; useful for developing community and leadership experience.	Relevant to CSIT and my interest in programming/software development; provides a path to strengthen Microsoft/Azure/AI-related skills and communication.

2. Readiness Assessment & Gap Analysis

Program	Current evidence / strengths	Gaps to address
GitHub Campus Experts	I have an active GitHub profile, a published GitHub Pages portfolio, and experience creating/uploading projects. I am building a public technical footprint through GitHub and coding activities.	Need to verify the 6-month GitHub-user requirement and student verification. Need more open-source contributions, technical writing, community participation and public-speaking/leadership evidence.
Microsoft Student Ambassadors	I am a full-time B.Tech CSIT student with programming, Git/GitHub and project experience. I am developing software-development and problem-solving skills.	Need stronger Microsoft/Azure/AI-specific learning evidence, more technical/community content, and experience sharing what I learn with peers. Current official program information should be checked before joining.

3. Four-Week Preparation Roadmap

Week	Actions	Expected evidence
1	Strengthen GitHub profile: improve README/profile, pin best projects, organize repositories, document projects clearly; check GitHub Education/student verification.	Professional GitHub profile + clearer project documentation.
2	Start beginner-friendly open-source contribution work: identify suitable repositories, read contribution guides, make a small meaningful contribution; begin relevant Microsoft Learn/Azure/AI learning.	At least one documented contribution/issue/PR where feasible + learning progress.
3	Build community evidence: participate in a technical event/community, share a short technical post or project explanation, and practice presenting a project to peers.	Technical writing/community participation + presentation practice.
4	Prepare application materials: resume, GitHub/project links, motivation essay, community-impact ideas and eligibility checklist. Re-check the official application page before submission.	Application-ready profile and documents.

Sources used: Activity 13 course document; GitHub Docs (Campus Experts); Microsoft official Student Ambassadors pages/2026 announcement. Current official sources were used where the course reference and current program information differ.

4. Drafted Application Material

Technical Community Motivation Essay

I am Hritik Anand, a second-year B.Tech student in Computer Science and Information Technology at REVA University. I am building my foundation in programming, problem solving, Git, GitHub and software development through academic work, coding practice and practical projects. I want to participate in a technical student community because I want to move beyond learning individually and start learning through collaboration, contribution and communication. A community such as GitHub Campus Experts would help me understand how technical communities are organized and how students can create useful opportunities for their peers. I am particularly interested in improving my open-source contribution skills, technical writing, public speaking and ability to explain what I learn. At the same time, the Microsoft Student Ambassadors pathway would help me explore Microsoft technologies, AI and cloud-oriented learning while developing my ability to share technical knowledge with other students. I can contribute by documenting my learning, sharing beginner-friendly programming resources, participating in projects, and helping peers discover practical ways to use developer tools. During the next four weeks, I plan to improve my GitHub profile, make an open-source contribution, complete relevant technical learning, participate in a community activity and prepare application materials. My long-term goal is to become a stronger software developer while also becoming someone who can learn with others and contribute back to the student technical community.

Word count: approximately 250 words.

5. Personal Action Checklist

- Verify GitHub account age and GitHub Student Developer Pack/student verification status.
- Improve GitHub profile README and project documentation.
- Make and document at least one beginner-friendly open-source contribution.
- Complete relevant Microsoft Learn/Azure/AI learning activities.
- Participate in a technical community/event and practice technical communication.
- Re-check official program pages for current application status and requirements before applying.

6. References / Verification Notes

Activity source: Activity 13 course document — Global Tech Ambassador & Open-Source Pathway Selection. It requires two-program analysis, gap assessment, a 4-week roadmap and application material. ■filecite■turn3file0■L43-L55■

GitHub: GitHub Docs states that Campus Experts must be GitHub users for at least six months, 18+, enrolled in higher education, have more than one year before graduation, and validate student status; it also states applications open every July for one month. ■cite■turn1search12■

Microsoft: The current official Microsoft Student Ambassadors pages describe the program as open to students across backgrounds and provide a no-application-required get-started path; Microsoft's 2026 announcement describes learning, community activities and milestone-based benefits. ■cite■turn0search3■turn0search6■

Important: Program rules and dates can change. This PDF records the information available at preparation time; the official program pages should be checked again immediately before an actual application.
